Cassowary - Wikipedia Cassowaries, genus *Casuarius*, are ratites that are native to the tropical forests of New Guinea, nearby islands, and northeastern Australia. There are three extant species. The most common of these, the southern cassowary, is the third-tallest and second-heaviest living bird, smaller only than the ostrich and emu. Cassowaries feed mainly on fruit, although all species are truly omnivorous and will take a range of other plant food, including shoots and grass seeds, in addition to fungi, invertebr. 10 Facts About Cassowaries | Mental Floss 10 Facts About Cassowaries. BY Mark Mancini. May 26, 2016. iStock. All birds are living dinosaurs, but the dagger-clawed cassowary especially looks the part. Hereâ€™s everything you need to know. Cassowary - The Most Dangerous Bird on Earth *Casuarius casuararius*, or simply Cassowary has been named the worldâ€™s most dangerous bird in the Guinness Book of Records. Found in the rain forests of Australia and New Guinea, these shy birds can slice you into two pieces with a single fatal kick (slightly exaggerated).

Cassowary Diet, Habitat, Reproduction, Attack, Sound ... The cassowary found in Australia are known as the Southern Cassowary or Double-wattled Cassowary. It is the second largest bird in the world. It is also the most dangerous bird on the planet. World's Most Dangerous Bird: 7 Facts About The Cassowary Some have claimed the cassowary to look like a "giant prehistoric turkey"â€™, but they are in fact descendants of dinosaurs. Looking somewhat like a combination of a turkey and an ostrich, their body features different colours and textures (from feathers to skin) like that of a dinosaur, from their. The Southern Cassowary - The Most Dangerous Bird on Earth ... The female Cassowary, on the other hand, does and is stronger and bigger than the male. During the mating ceremony it is the male who takes the passive role and the female can take up to three different mates contiguously. The final partner she attracts will be the one to rear the young. Thatâ€™s correct, after a month or so of courtship the female lays the clutch of eggs and removes herself.

Cassowary | bird | Britannica.com Cassowary (genus *Casuarius*), any of several species of large flightless birds of the Australo-Papuan region. Cassowaries are the only members of the family Casuariidae and belong to the order Casuariiformes, which also includes the emu. There are three species (counted by some experts as six), each with several races.
